About

I'm a product designer and developer focussed on user experience (UX) and interface (UI) design. Most recently I completed a consultancy with Zealth AI, a Y-Combinator backed startup, where I designed the UX and UI of the doctor and patient apps for their flagship cancer monitoring and management product, CareShare.

Previously I worked as the Principal UX Designer at Sauce Labs and the Lead Designer at BrowserStack, both leaders in cloud-based website and app testing. At BrowserStack, as the first employee, I led the Front-end engineering, Content and Design teams through three successful product launches, a redesign of the flagship Live product, a brand redesign and the creation of BrowserStack's first visual language and component library.

Prior to my career in design, I worked with Sony Music as the Manager for Technical Operations across Asia, helping online partners like iTunes and Virgin Music set up secure, automated content and asset delivery services.

Skills

User Experience and User Interface Design

Proficient with Figma, Sketch, Adobe Photoshop/ Illustrator, InVision

Coding

Proficient in Front-End engineering with JavaScript and CSS and back-end languages like PHP and SQL.

Experienced with building scalable component libraries that reduce prototyping and deployment time and deliver consistent experiences.

Education

Bachelor of Engineering, Computer Science

Mumbai University
Sep 2001 - Jun 2005

Projects

Designing the UX for reporting and managing symptoms of cancer.
